

IN THE CLAIMS

Please amend claim 1 by rewriting it as follows:

1. (Amended) An apparatus for tracking remotely generated signals comprising:
a first tracker for tracking a first component of a first remotely generated signal and including a W-code signal generator responsive to a second component of the first signal for locally generating a first W-code signal from a second component of the first signal; and
a second tracker for tracking a first component of a second remotely generated signal according to the first W-code signal; wherein
the second component of the first signal has the same pattern as the first component of the second signal.
